Inflation Matrices and *ZME*-Matrices that Commute with a Permutation Matrix

Jeffrey L. Stuart

DOI:10.1137/0609036

摘要

Centrosymmetric matrices are matrices that commute with the permutation matrix *J*, the matrix with ones on its cross-diagonal. This paper generalizes the concept of ...d considers the properties of matrices that commute with an ...on matrix *P*, the *P*-commutative matrices. In particular,it focuses ...ses of matrices: inflation matrices and ZME-matrices. The ...nutative inflators is determined, and then this is used to ...commutative ZME-matrices. Centrosymmetric matrices in these classes are presented as a special case.

Prior Publication and Simultaneous Submissions *

版权协议

* With the exception of those works indicated clearly in both a cover letter and a footnote on the first page of the paper, the authors certify that the general content of the manuscript, in whole or in part, is not submitted, accepted, or published elsewhere, including conference proceedings. Authors should upload any such indicated overlapping works as supporting materials to the submission.

The authors also certify that the general content of the manuscript, in whole or in part, will not be submitted, accepted, or published elsewhere, including conference proceedings, while it is under consideration or in production. The only exception is if the authors have received specific prior written approval from the editor-in-chief. These policies do not prohibit releasing the manuscript as a technical report, posting the manuscript to a preprint server, or publishing a short abstract at a conference or workshop that does not formally publish reviewed proceedings.

Failure to adhere to this policy is cause for rejection of the manuscript.

By selecting "yes," the authors of this paper confirm they read and agree to the conditions of SIAM's Policy on Prior Publication and Simultaneous Submissions, outlined here in blue.

Significance statement *

Provide a brief response to the following.

简短易懂的文章贡献总结

*Research published in the journal should make a significant contribution to advancing the field of uncertainty quantification. This may be achieved by significant advances in theory, methodology, algorithmic development, computation, or application of uncertainty quantification techniques to advance a scientific investigation or field; a significant contribution might also be achieved at the interfaces of these areas.

Each submission to JUQ must include a brief **significance statement** which explains the novel contributions of the paper in plain terms understandable to the broad readership of the journal. Please include your statement below.

Supplementary materials *

JUQ will consider supplementary materials to complement articles. This might include additional figures or examples, animations, data sets used in the paper, computer code used to generate figures or tables, or other materials that are necessary to fully document the research and should be published together with the paper.

Authors should **NOT** upload files for other purposes under the label "supplementary materials."
